

Stationary tank washing nozzles

6353

10250-1

9800

DESIGN FEATURES

Type 6353 and 10250 nozzle assemblies provide effective washing or rising of tanks of many sizes. Both models feature 13 full cone nozzles which spray all interior tank surfaces at pressures up to 4bar. Nozzle headers are available in brass, mild steel and stainless steel.

The type 6353 nozzles assembly features a large flow capacity for cleaning tanks up to 3.1m in diameter. Flow rates can be varied by using 1/4" or 3/8" full cone nozzles.

The 6353 fits through tank openings 130mm in diameter or more.

The type 10250-1 nozzle assembly offers an extra large flow capacity for cleaning larger tanks up to 6.7m in diameter.

The 9800 washing nozzles are specially designed for the efficient cleaning of smaller vessels.

The 9800 model offer a choice of 15 or 21 full cone spray tips which spray all interior surfaces at pressure up to 10bar.

The type 9800 is designed to pass through a standard keg bung, and to fit on automatic keg washers. The maximum spray head diameter is 35mm with a 16mm neck which allows for drainage while washing. Stainless steel construction provides maximum corrosion resistance.
