10" Filter Housing TLBB-10

20" Filter Housing TLBB-20

Item	TLBB-10	TLBB-20
Filter cartridge size (sold separately)	10"x4-1/2 inches	20"x4-1/2 inches
Product dimensions	185mmx185mmx358mm	185mmx185mmx608mm
Material	20%GFPP(Glass Fiber Polypropylene)	
Inlet/Outlet	3/4"	
Maximum pressure	115psi	
Failure test pressure	435psi	
Cycle test pressure	100,000cycles (0-115psi)	
Maximum temperature	100 degrees F (37.8 degrees C)	

Water Filter Housing

Application & Feature

1. Removes Dirt, Sand, and Silt from Your Water Supply

The Lanlang Filter Housing makes sure your family has a clean, fresh water supply throughout the house. This filtration system works to reduce dirt, sand and silt buildup in plumbing lines. Your kitchen, laundry room, bathroom and outdoor water comes out clean and fresh to help keep your family healthy.

2. Inlet/Outlet for Easy Installation

A 3/4" inch inlet and outlet allows you to quickly install the filter on your main cold water line. The water filter will remain safe and secure inside the opaque housing. For further convenience, the dynamically sealing and self cleaning O-ring around the housing protects against leaks and clogging, letting your filter work without damaging the cartridge.

3. GFPP Material for High Quality Assurance

Compared with other PP material filter housing, we add 20% GFPP (Glass Fiber Polypropylene) material to producing the collector and housing to improve the heat resistance and strength. Also we have improved all the other parts of the product for high quality assurance.

4. Prolongs the Lives of Your Water-Using Appliances

Humans aren't the only ones who benefit from clean water. Machines also run more smoothly and longer, when water they take in is fresh and dirt free. Because the Water Filter Housing limits the amount of dirt and grime introduced into your appliances, your home's water using devices are likely to last longer and perform at their best.
